Progress Report

1) Which tasks have been completed?
The tasks that have completed so far is the Reddit Sentiment Analysis Chrome Extension built in JavaScript that can access content on web pages. You can build and install the chrome extension locally and use it, albeit without much functionality.

2) Which tasks are pending?
The tasks pending are to implement logic to scrape posts on reddit.com and perform sentiment analysis on them to determine if they are positive, neutral, or negative posts.

3) Are you facing any challenges?
Some challenges we are facing are learning a new programming language, JavaScript, and programming framework, next.js. Our team does not have much familiarity with these new technologies, so the past few weeks have been spent mostly learning and experimenting with them.
